The Stomatognathic System in Practice

A Hands-On Approach to Clinical Assessment and Integration

Presented by

Charles Héroux, DC, DIBAK

8–9 May 2027

Location

British College of Osteopathic Medicine
6 Netherhall Gardens
London
NW3 5RR

Seminar Times

Saturday 9.30am – 5.30pm
Sunday 9.00am – 4.00pm
Registration on Saturday from 9.00am

Fees

ICAK-UK Member: £425 (Early Bird: £375)
Non-Member: £475 (Early Bird: £425)
Early Bird prices available until 28 February 2027.

CPD

12.5 Hours
Participants will receive a Certificate of Attendance for an Intermediate Applied Kinesiology seminar, which counts towards PAK certification.

Booking

Book online at www.icak.co.uk

Professional Applied Kinesiology

About the Seminar

The stomatognathic system involves much more than the temporomandibular joint. Relationships between the cranium, dentition, occlusion, musculature, neurological organisation, visual system and posture can all form part of the clinical picture.

This Intermediate Applied Kinesiology seminar explores a practical and integrated approach to assessing the stomatognathic system, building upon the cranial and TMJ principles introduced during Foundation training.

Charles Héroux will guide participants through hands-on assessment and clinical application, exploring how individual findings can be evaluated, challenged and integrated rather than considered in isolation.

The emphasis throughout the weekend will be on practical clinical reasoning: recognising meaningful patterns, understanding relationships and knowing when and where to look further.

Who Should Attend

Osteopaths • Chiropractors • Medical Doctors • Physiotherapists • Acupuncturists • Dentists • Other eligible regulated healthcare professionals

It is particularly valuable for practitioners interested in:

- TMJ and stomatognathic presentations
- Cranial assessment and integration
- Dental and occlusal influences
- Neurological organisation
- Postural and gait relationships
- Complex, multi-system presentations

This course is designed for qualified healthcare practitioners wishing to develop a more integrated approach to assessing the stomatognathic system. Some prior knowledge of Applied Kinesiology or manual muscle testing would be beneficial, but is not essential.

Course Highlights

- Advanced cranial assessment and cranial faults
- Cranial suture dysfunction
- TMJ assessment and internal derangements
- Dentition, occlusion and the Neurological Tooth
- Oral function and stomatognathic relationships
- Neurological, visual and postural integration
- Bringing individual findings together in clinical practice

What You Will Gain

- A deeper understanding of the stomatognathic system
- Advanced cranial and TMJ assessment skills
- Greater understanding of dental and occlusal influences
- Practical strategies for neurological and postural integration
- Improved clinical reasoning and reassessment
- Greater confidence integrating findings into clinical practice

About Charles Héroux

Charles Héroux, DC, DIBAK is an experienced Applied Kinesiology practitioner and internationally recognised educator with many years of clinical and teaching experience.

Throughout his career, Charles has had the opportunity to study with and spend time with many of the influential figures involved in the development of Applied Kinesiology, including its founder, Dr George Goodheart Jr.

Charles served as Chair of the ICAK International Educational Council until 2025, contributing to the development and maintenance of Applied Kinesiology education internationally.

His teaching combines detailed clinical assessment with a strongly practical approach, helping practitioners bring individual findings together into a more integrated understanding of the patient.

Cancellation Policy: Cancellations received on or before 31 March 2027 will be refunded, less a £100 administration fee. No refunds will be given for cancellations received after 31 March 2027.
